WORK EXPERIENCE

Software Engineer @ *LogixHealth - Bedford, MA , USA*

Sep 2023 – Present

- Led the **migration** of 20+ tables and 30+ stored procedures to a new **MySQL** database for the MobilePay application, enhancing **query performance** by 68%. Updated **microservices** connection strings and ensured seamless API functionality post-deployment.
- Engineered and integrated **RESTful APIs** using **Swagger**, leveraging **C#** and **.NET** to ensure secure, scalable communication between microservices, enhancing request handling efficiency by 57%.
- Implemented Patient email notifications using Orchestrated **RabbitMQ** and **Azure Key Vault** integration for secure, asynchronous microservice communication, reducing message latency by 60ms and enhancing application **responsiveness**.
- Implemented voucher card functionality in the DoctorPayment application using Angular, **TypeScript**, and HTML. Developed Angular components to efficiently fetch and display **patient balances**, optimizing UI performance and reducing page refresh time by 44%.
- Optimized **CI/CD** pipelines by refining **YAML** configurations, integrating **Docker** for containerized deployments, and automating **DACPAC** database deployments, reducing manual effort by **66.67%** and cutting deployment time from 30 minutes to 10 minutes.
- Streamlined **project management** by handling high-priority PBIs in **Azure DevOps** and designing **use case** diagrams in **Azure Wiki** with Mermaid to enhance **team collaboration** and project clarity.

Software Engineer @ *Code Trade PVT LTD. - Gujarat, India*

Nov 2019 – March 2021

- Integrated **Angular** Front-end, **C#** and **ASP.NET Core** backend, and **SQL Server** database management, contributing to the successful launch of **5+** features within sprint cycles and ensuring **end-to-end** functionality across the stack.
- Applied **Java** for testing the **Web application** with Shift-Right techniques, ensuring 86% **code coverage** and enhancing the reliability and performance of data parsing components.
- Architected RESTful APIs using **Spring**, enabling efficient system communication and ensuring high flexibility in end-points and payloads for better **cross-platform** integration.
- Published optimized SQL queries and customized schema designs in **SQL Server**, driving performance improvements and streamlining database management processes across the application lifecycle.

TECHNICAL SKILLS

Programming Languages: C#, Python, C/C++, Java, HTML5, CSS3, JavaScript, node.js, React JS, Angular, Hibernate

Database: MS SQL Server, Oracle, MySQL, MongoDB, PostgreSQL, NoSQL

Frameworks and Libraries: ASP.Net Core, Microservices, Spring (Boot,Cloud,MVC), RESTful API, JSF, Servlets, JSP

Build Tools: Maven, Gradle, JUnit, SonarQube, Docker, Jenkins, Jira, Elasticsearch, Azure develops board, RabbitMQ, Flask

Cloud Platforms: Amazon Web services (IAM, EC2, S3, Elastic Load Balancing, Elastic Beanstalk, Dynamo DB)

Methodology: SDLC, Waterfall, Agile

Version Control Tools: Git, GitHub, Bitbucket

PROJECT WORK

Wonder Boon | *Java, Spring, HTML*

- Developed a **web-based** online gift application using **Java servlets**, creating an **intuitive** and **visually appealing** interface with **WordPress**.
- Led the creation of database tables, **class diagrams (UML)**, and use case diagrams, resulting in a useful mapping between **relational database** tables.
- Exhibited originality by leveraging **HTML** and **CSS** to design and create an eye-catching webpage, hence elevating the project's overall visual appeal.

Intrusion Detection System | *Graylog Server, Snort INS tool*

- Implemented **Snort IPS** on **Ubuntu** to detect and mitigate real-time threats, preventing future attacks by tracking and analyzing system activity logs of gateways and network devices
- Monitored device logs and analyzed network connections using **Graylog**, assessing message frequencies via a centralized dashboard for efficient threat detection and event investigation.

Dietary Discernment Plan | *Python (Pandas, NumPy, Tableau)*

- Deployed Python's powerful tools, such as **Pandas** and **NumPy**, to input data and produce perceptive plot diagrams that successfully Displayed the project's outcomes.
- Used NumPy and Pandas, two of Python's most potent tools, to process data and create insightful **plot diagrams** that effectively displayed the project.

EDUCATION

Arizona State University | Master's in Information Technology | **GPA: 3.67/4**

Tempe, Arizona

Courses – NLP, Analyzing Big Data, Cloud Architecture, Developing Security Policy

2021 – May 2023

Gujarat Technological University | B.Tech in Computer Engineering | **GPA: 3.33/4**

Ahmedabad, Gujarat

OOP, Software Engineering, Web Technology, Distributed DBMS, AI, Python Programming

2016 – 2020

CERTIFICATION

Certified with AWS Solutions Architect - Associate

Certified with AWS Academy Cloud Security Foundations
